

We Welcome You to Learn More About LED Grow Master Global

Based in Bend, Oregon; LED Grow Master Global, LLC is the master distributor worldwide, for SolarOasis LED grow lighting. LGM offers efficient and durable lighting for year round production, while providing significant savings and advantages over other lighting options. Our mission is to create an understanding of proper methods of growing under LEDs while supplying the technology to present distribution channels and research facilities. With over 20 years of experience in the lighting industry, LED Grow Master Global, LLC has established an extensive network of distributors and good will relationships with the leaders of the industry. Whether your relationship with us is formed through a single purchase, or you choose to become a partner in distribution- you can count on us to stand behind you and our products.

LED Grow Master Global currently holds distributors in the USA, Canada, Australia, The Netherlands, Spain, and Denmark. Our business philosophy toward our clients is three-fold, consisting of service, education, and satisfaction. In order to fully meet your needs, we provide in depth product support ensuring that you have the tools you need to understand the concepts behind LED lighting. We are able to supply a complete range of accessory supplies for our line of LED grow lights through partner distributors.

LED Grow Master bars are NAFTA certified and ROHS compliant. Our lighting is manufactured by SolarOasis, in the USA. SolarOasis leads the industry in LED lighting solutions and engineering. They currently hold 12 patents granted or pending including the first US patent for a commercial LED plant grow light. The engineers at SolarOasis began developing OEM Light Emitting Diodes (LED) applications in 1992. These LEDs have now been used around the world for over 18 years. The company was established in 2000 to address the needs of NASA and continues to supply product to their projects.

As a JIT (Just in Time) manufacturer, SolarOasis is able to quickly respond to advancements in LED technology and new discoveries in plant growing in order to implement these changes into our products. SolarOasis combines the highest quality components, with current proven methods, to deliver the best product possible both today and tomorrow. Their dedication to quality has placed us as the leader worldwide for low energy, supplemental plant grow lighting for commercial greenhouses, university/industrial research, and home use. We are proud to have the opportunity to share this efficient technology with the world.
